

BrickBreakerBall

Game Rules & Sprite Reference - English Edition (Corrected Image Proportions)

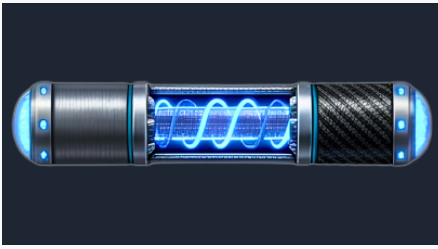

This revised PDF fixes the displayed proportions of the ball and power-up images by preserving each sprite's aspect ratio inside a dark panel.

1. Core Game Rules

- Move the paddle left and right at the bottom of the playfield.
- Return the ball with the paddle so it reaches the brick field.
- A stage ends when all bricks that count as breakable objectives have been destroyed.
- Unbreakable steel bricks normally do not count toward the stage-clear requirement.
- If the last active ball falls below the playfield, the player loses one life.
- With multiball active, a life is not lost until every active ball has been lost.
- Losing a life clears most active power-up effects, removes falling power-ups, and resets the paddle/ball to the serve state.
- Where the ball hits the paddle changes the return angle: center is straighter, left side sends it left, and right side sends it right.
- The ball gradually becomes faster during play.
- Some destroyed bricks can drop power-ups; the player may collect or avoid them.

2. Paddles

Normal Paddle

Sprite ID: paddle_normal

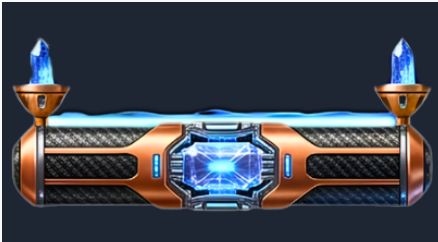

The baseline paddle. Moves left and right, returns the ball, has no built-in shooting or grabbing ability, and can be resized by power-ups.

Laser Paddle

Sprite ID: paddle_laser

Armed paddle with two launch points. It fires Laser Projectiles upward to hit bricks. The supplied rules also describe Fire and Piercing effects being able to carry over to laser shots when those effects are active.

Sticky / Grab Paddle

Sprite ID: paddle_sticky

Catches a ball on contact and holds it to the paddle until the player releases it. The supplied rules allow it to hold multiple balls while multiball is active.

3. Ball System

Size	Description
Small	Small / Shrink size. About half-size in the supplied rules; harder to return, but better for narrow gaps.
Medium	Normal/default size and baseline handling.
Large	Large / Mega size. About twice normal size in the supplied rules; easier to return but less suitable for narrow gaps.

Type	Description
Normal	Standard collision behavior: the ball rebounds from the paddle, walls, and ordinary bricks.
Fire	Fire effect: the struck brick explodes and can damage nearby bricks. The supplied rules describe Fire + Piercing as compatible effects.
Piercing	Piercing / Thru-Brick effect: passes through bricks and continues moving instead of bouncing from each brick.

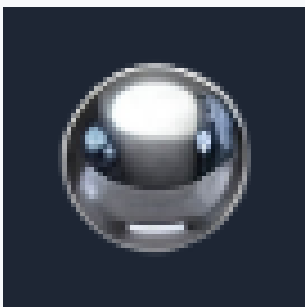

Small Fire Ball

Size: Small | Type: Fire

Sprite ID: ball_fire_small

Small / Shrink size. About half-size in the supplied rules; harder to return, but better for narrow gaps. Fire effect: the struck brick explodes and can damage nearby bricks. The supplied rules describe Fire + Piercing as compatible effects.

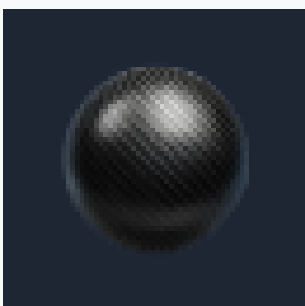

Small Normal Ball

Size: Small | Type: Normal

Sprite ID: ball_normal_small

Small / Shrink size. About half-size in the supplied rules; harder to return, but better for narrow gaps. Standard collision behavior: the ball rebounds from the paddle, walls, and ordinary bricks.

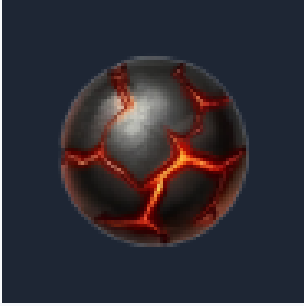

Small Piercing Ball

Size: Small | Type: Piercing

Sprite ID: ball_piercing_small

Small / Shrink size. About half-size in the supplied rules; harder to return, but better for narrow gaps. Piercing / Thru-Brick effect: passes through bricks and continues moving instead of bouncing from each brick.

Medium Fire Ball

Size: Medium | Type: Fire

Sprite ID: ball_fire_medium

Normal/default size and baseline handling. Fire effect: the struck brick explodes and can damage nearby bricks. The supplied rules describe Fire + Piercing as compatible effects.

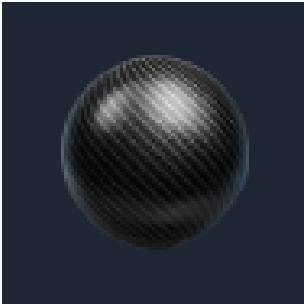

Medium Normal Ball

Size: Medium | Type: Normal

Sprite ID: ball_normal_medium

Normal/default size and baseline handling. Standard collision behavior: the ball rebounds from the paddle, walls, and ordinary bricks.

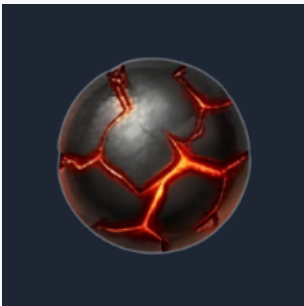

Medium Piercing Ball

Size: Medium | Type: Piercing

Sprite ID: ball_piercing_medium

Normal/default size and baseline handling. Piercing / Thru-Brick effect: passes through bricks and continues moving instead of bouncing from each brick.

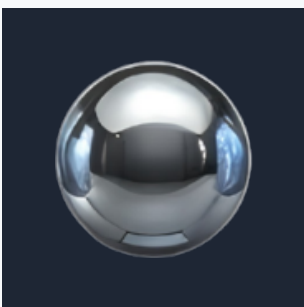

Large Fire Ball

Size: Large | Type: Fire

Sprite ID: ball_fire_large

Large / Mega size. About twice normal size in the supplied rules; easier to return but less suitable for narrow gaps. Fire effect: the struck brick explodes and can damage nearby bricks. The supplied rules describe Fire + Piercing as compatible effects.

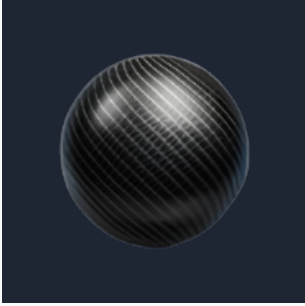

Large Normal Ball

Size: Large | Type: Normal

Sprite ID: ball_normal_large

Large / Mega size. About twice normal size in the supplied rules; easier to return but less suitable for narrow gaps. Standard collision behavior: the ball rebounds from the paddle, walls, and ordinary bricks.

Large Piercing Ball

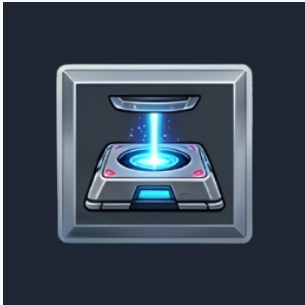

Size: Large | Type: Piercing

Sprite ID: ball_piercing_large

Large / Mega size. About twice normal size in the supplied rules; easier to return but less suitable for narrow gaps. Piercing / Thru-Brick effect: passes through bricks and continues moving instead of bouncing from each brick.

4. Power-Ups / Charms

The detailed sprite map defines 20 power-up icons. Classification comes directly from the map.

Laser Auto-Charge

Classification: Positive

Sprite ID: powerup_laser_auto_charge

Automatically fills the laser machine/gauge. The supplied sprite-map note says its indicator moves rapidly up and down.

Extra Life

Classification: Positive

Sprite ID: powerup_extra_life

Adds one life (+1).

Kill Paddle

Classification: Negative

Sprite ID: powerup_kill_player

Immediately destroys the player paddle and costs a life under the normal life-loss rules.

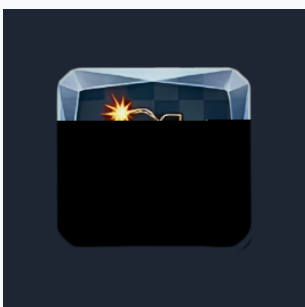

Expand Paddle

Classification: Positive

Sprite ID: powerup_expand_paddle

Increases paddle width, making the ball easier to return.

Timed Bomb Bricks

Classification: Positive

Sprite ID: powerup_timed_bomb_bricks

Turns bricks hit by the ball into timed bombs. When a timed bomb detonates, it destroys nearby bricks.

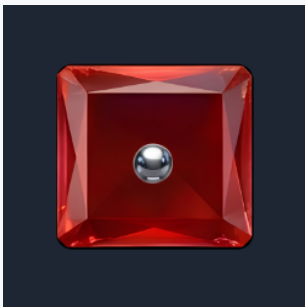

Random Positive Boost

Classification: Positive

Sprite ID: powerup_random_positive

Awards one randomly selected positive power-up.

Shrink Ball

Classification: Negative

Sprite ID: powerup_shrink_ball

Changes the active ball to the Small size state.

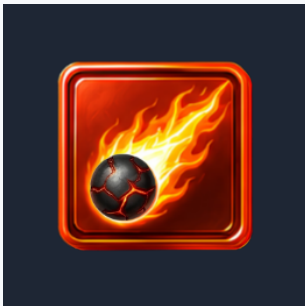

Shrink Paddle

Classification: Negative

Sprite ID: powerup_shrink_paddle

Reduces paddle width, making returns harder.

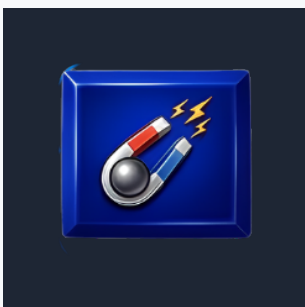

Fireball

Classification: Positive

Sprite ID: powerup_fireball

Changes the ball to its Fire state. The Fire Ball uses the matching sprite for the ball's current size.

Magnetic Paddle

Classification: Positive

Sprite ID: powerup_magnet_paddle

Makes the paddle attract the ball when the ball enters its nearby magnetic range.

Slow Ball

Classification: Positive

Sprite ID: powerup_slow_ball

Reduces ball movement speed.

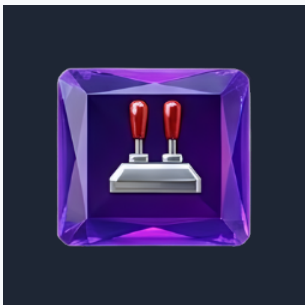

+4 Multiball

Classification: Positive

Sprite ID: powerup_multiball_plus_4

Adds four extra playable balls to the balls already in play.

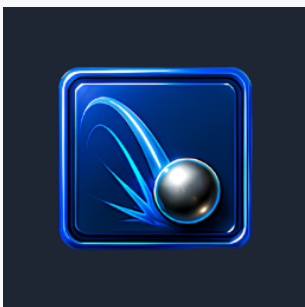

Dual Paddle

Classification: Positive

Sprite ID: powerup_dual_paddle

Activates an additional paddle so the player controls two paddles.

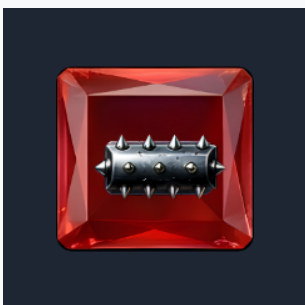

Fast Ball

Classification: Negative

Sprite ID: powerup_speed_ball

Raises ball movement speed.

Instant Ball Kill

Classification: Negative

Sprite ID: powerup_instant_kill_ball

Immediately removes the affected ball. A life is only lost when the last active ball is gone.

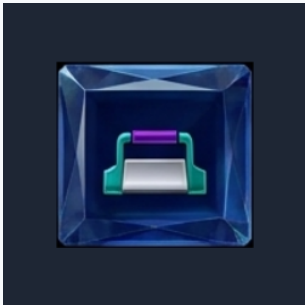

Mega / Big Ball

Classification: Positive

Sprite ID: powerup_big_ball

Changes the ball to the Large size state.

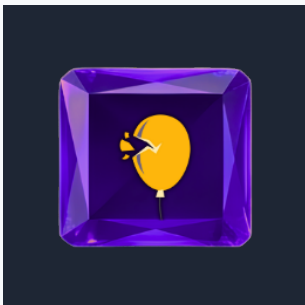

Activate Sticky Paddle

Classification: Positive

Sprite ID: powerup_sticky_paddle

Changes the paddle to the Sticky/Grab state. A ball that reaches it is held temporarily and can then be released by the player.

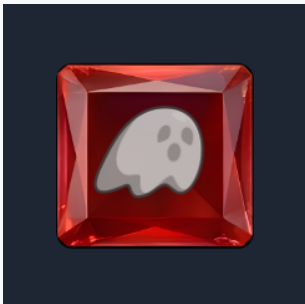

One-Hit Breaker

Classification: Positive

Sprite ID: powerup_one_hit_any_brick

Makes the ball destroy any brick that is allowed to be affected in one hit. Explicitly unbreakable/special exceptions remain code-defined.

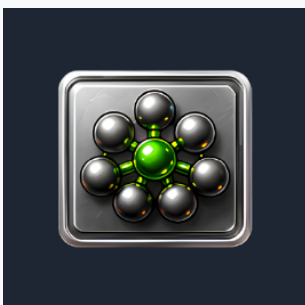

Ghost Ball

Classification: Special

Sprite ID: powerup_ghost_ball

Makes the ball ghost through bricks without breaking them.

15-Ball Multiball

Classification: Positive

Sprite ID: powerup_multiball_15

Creates or sets a play group of 15 balls under the game's multiball system.

5. Bricks

Keep brick appearance and brick gameplay behavior as separate concepts. Intact/damaged pairs are damage states of the same family.

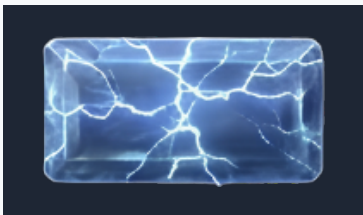

Rough Stone Brick

Material: rough_stone

Sprite ID: brick_rough_stone

Breakable. On impact it breaks and sends the ball back in a randomized direction because of its uneven surface.

Lightning Speed Pass-Through Brick

Collision: pass_through

Material: transparent_lightning

Sprite ID: brick_lightning_speed_pass_through

Pass-through brick. The ball travels through it, the brick disappears, and the ball becomes faster/lighter according to the supplied sprite-map note.

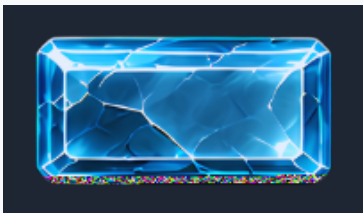

White Electric Crystal - Intact

Damage State: Intact

Material: electric_crystal

Sprite ID: brick_electric_white_intact

First normal hit changes this intact brick into White Electric Crystal - Damaged.

Blue Crystal - Intact

Damage State: Intact

Material: crystal

Sprite ID: brick_crystal_blue_intact

First normal hit changes this intact brick into Blue Crystal - Damaged.

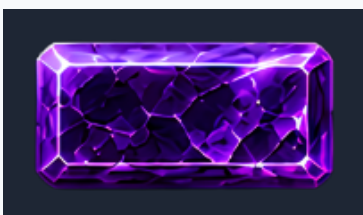

Red Crystal - Intact

Damage State: Intact

Material: crystal

Sprite ID: brick_crystal_red_intact

First normal hit changes this intact brick into Red Crystal - Damaged.

Purple Crystal - Intact

Damage State: Intact

Material: crystal

Sprite ID: brick_crystal_purple_intact

First normal hit changes this intact brick into Purple Crystal - Damaged.

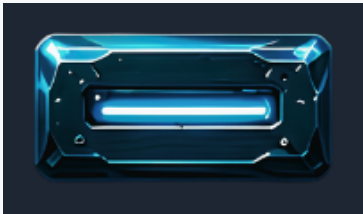

Gray Stone - Intact

Damage State: Intact

Material: stone

Sprite ID: brick_stone_gray_intact

First normal hit changes this intact brick into Gray Stone - Damaged.

Black Hole Teleporter

Material: black_hole

Sprite ID: brick_black_hole_teleporter

The ball enters the black hole and reappears from a random direction/side with an angle somewhere within 360 degrees. The supplied map does not specify whether the brick is consumed.

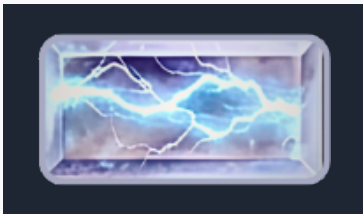

Random Inventory Power-Up Brick

Material: mystery

Sprite ID: brick_random_inventory_powerup

Grants a random power-up and stores that reward in the Items/Inventory system. The supplied map does not specify whether the brick disappears after triggering.

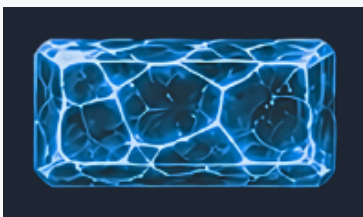

White Electric Crystal - Damaged

Damage State: Damaged

Material: electric_crystal

Sprite ID: brick_electric_white_damaged

Damaged state after the first hit. The next normal hit breaks it under the supplied rule description.

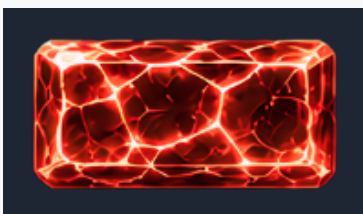

Blue Crystal - Damaged

Damage State: Damaged

Material: crystal

Sprite ID: brick_crystal_blue_damaged

Damaged state after the first hit. The next normal hit breaks it.

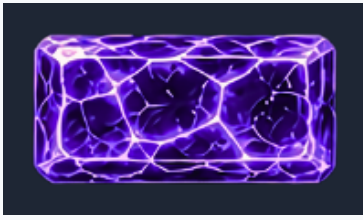

Red Crystal - Damaged

Damage State: Damaged

Material: crystal

Sprite ID: brick_crystal_red_damaged

Damaged state after the first hit. The next normal hit breaks it.

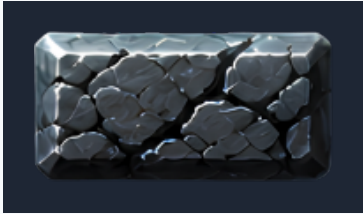

Purple Crystal - Damaged

Damage State: Damaged

Material: crystal

Sprite ID: brick_crystal_purple_damaged

Damaged state after the first hit. The next normal hit breaks it.

Gray Stone - Damaged

Damage State: Damaged

Material: stone

Sprite ID: brick_stone_gray_damaged

Cracked stone state after the first hit. The next normal hit breaks it.

Unbreakable Steel Brick

Normal Breakable: No

Material: steel

Sprite ID: brick_steel_unbreakable

Does not break from a normal collision. Piercing/Thru-Brick or explosions may affect it depending on the final game rules you implement.

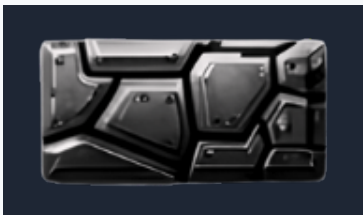

Cyan Crystal - Intact

Damage State: Intact

Material: crystal

Sprite ID: brick_crystal_cyan_intact

First normal hit changes this intact brick into Cyan Crystal - Damaged.

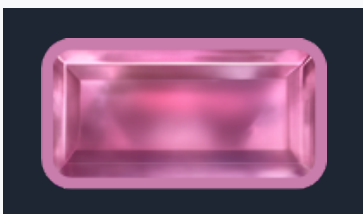

Dark Armored Brick - Intact

Damage State: Intact

Material: armored_dark

Sprite ID: brick_armored_dark_intact

First normal hit changes this armored brick into Dark Armored Brick - Damaged.

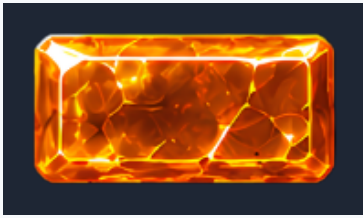

Pink Crystal - Intact

Damage State: Intact

Material: crystal

Sprite ID: brick_crystal_pink_intact

First normal hit changes this intact brick into Pink Crystal - Damaged.

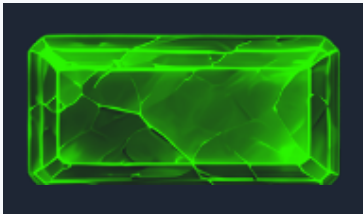

Orange Crystal - Intact

Damage State: Intact

Material: crystal

Sprite ID: brick_crystal_orange_intact

First normal hit changes this intact brick into Orange Crystal - Damaged.

Green Crystal - Intact

Damage State: Intact

Material: crystal

Sprite ID: brick_crystal_green_intact

First normal hit changes this intact brick into Green Crystal - Damaged.

Basic One-Hit Brick

Hits To Break: 1

Material: basic_metal

Sprite ID: brick_basic_one_hit

Standard breakable brick. One normal hit destroys it.

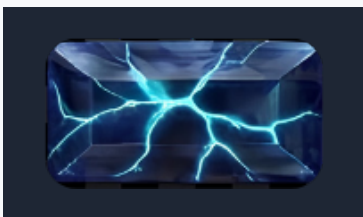

Spiked Hazard Brick

Material: spiked_metal

Sprite ID: brick_spiked_hazard

Special hazard brick. The sprite map marks it as a hazard, but does not define the exact collision penalty or whether it can be destroyed. That behavior remains game-code defined.

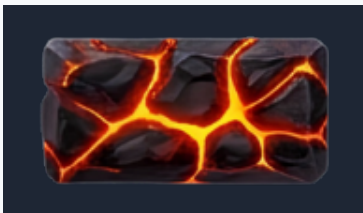

Cyan Crystal - Damaged

Damage State: Damaged

Material: crystal

Sprite ID: brick_crystal_cyan_damaged

Damaged state after the first hit. The next normal hit breaks it.

Dark Armored Brick - Damaged

Damage State: Damaged

Material: armored_dark

Sprite ID: brick_armored_dark_damaged

Damaged glowing armored state. The next normal hit breaks it under the supplied balance description.

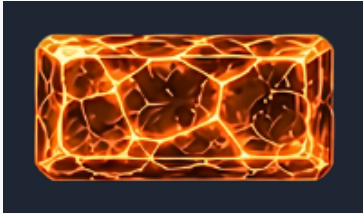

Pink Crystal - Damaged

Damage State: Damaged

Material: crystal

Sprite ID: brick_crystal_pink_damaged

Damaged state after the first hit. The next normal hit breaks it.

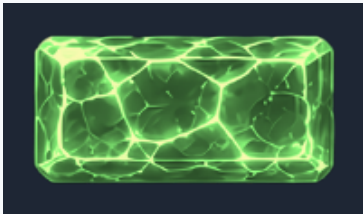

Orange Crystal - Damaged

Damage State: Damaged

Material: crystal

Sprite ID: brick_crystal_orange_damaged

Damaged state after the first hit. The next normal hit breaks it.

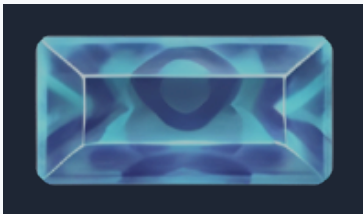

Green Crystal - Damaged

Damage State: Damaged

Material: crystal

Sprite ID: brick_crystal_green_damaged

Damaged state after the first hit. The next normal hit breaks it.

Transparent Slow Pass-Through Brick

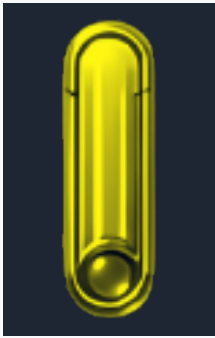

Collision: pass_through

Material: transparent_energy

Sprite ID: brick_transparent_slow_pass_through

Pass-through brick. The ball passes through, the brick disappears, and the ball slows down.

6. Additional Elements

Laser Projectile

Category: Projectile

Sprite ID: laser_bullet

The projectile fired upward by the Laser Paddle.

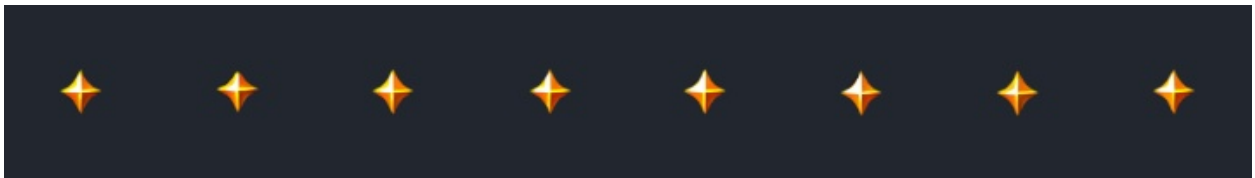

Electric Floor Wire

Category: Hazard

Sprite ID: electric_floor_wire

Electric hazard at the bottom of the play area.

Spark Animation

Eight frames used for spark / impact feedback.
